

With our charging station, **the property's existing electricity capacity can be used** to charge electric cars and plug-in hybrids.

CaCharge's charging solution is a system for the normal charging of electric cars and plug-in hybrids, where the electricity capacity of a property is utilised resource-efficiently over time.

**Our solution consists of:**

- A cloud service that monitors, controls and distributes power between cars.
- An easy-to-use mobile app where users can authenticate, start and end charging.
- A web portal for administration and collecting statistics.

**Setup and installation**

The charging station has two sockets and can be mounted on a wall or post between two parking spaces. Installation costs can be minimised by connecting a three-wire cable (up to 16 mm<sup>2</sup>) in a chain to all the stations in a group, where each station uses only one of the wires. Please contact us for a complete installation manual.
